STATEMENT

Purpose

To define and describe the accepted indications for Tevimbra (tislelizumab-jsgr) usage in the treatment of cancer, including FDA approved indications, and off-label indications.

Evolent is responsible for processing all medication requests from network ordering providers. Medications not authorized by Evolent may be deemed as not approvable and therefore not reimbursable.

The use of this drug must be supported by one of the following: FDA approved product labeling, CMS-approved compendia, National Comprehensive Cancer Network (NCCN), American Society of Clinical Oncology (ASCO) clinical guidelines, or peer-reviewed literature that meets the requirements of the CMS Medicare Benefit Policy Manual Chapter 15.

INDICATIONS

Continuation requests for a not-approvable medication shall be exempt from this **Evolent policy provided**

- The member has not experienced disease progression on the requested medication
- The requested medication was used within the last year without a lapse of more than 30 days of having an active authorization AND
- Additional medication(s) are not being added to the continuation request.

Chronic Lymphocytic Leukemia (CLL)/Small Lymphocytic Lymphoma (SLL)

Tevimbra (tislelizumab-jsgr) may be used in combination with Brukinsa (zanubrutinib) in adult members with CLL/SLL for the histologic (Richter) transformation to diffuse large B-cell lymphoma (clonally related or unknown clonal status). The members have the del(17p)/TP53 mutation, OR are chemotherapy refractory or unable to receive chemoimmunotherapy.

Esophageal Squamous Cell Carcinoma

Tevimbra (tislelizumab-jsgr) may be used in adult members with unresectable or metastatic esophageal squamous cell carcinoma (ESCC) after prior systemic chemotherapy that did not include an immune checkpoint inhibitor (i.e. nivolumab, pembrolizumab, durvalumab).

CONTRAINDICATIONS/WARNINGS

None

EXCLUSION CRITERIA

- Disease progression while taking Tevimbra (tislelizumab-jsgr).
- Prior use with an immune checkpoint inhibitor.
- Dosing exceeds single dose limit of 200 mg.
- Investigational use of Tevimbra (tislelizumab-jsgr) with an off-label indication that is not sufficient in evidence or is not generally accepted by the medical community. Sufficient evidence that is not supported by CMS recognized compendia or acceptable peer reviewed literature is defined as any of the following:
 - Whether the clinical characteristics of the patient and the cancer are adequately represented in the published evidence.
 - o Whether the administered chemotherapy/biologic therapy/immune therapy/targeted therapy/other oncologic therapy regimen is adequately represented in the published evidence.
 - Whether the reported study outcomes represent clinically meaningful outcomes experienced by patients. Generally, the definitions of Clinically Meaningful outcomes are those recommended by ASCO, e.g., Hazard Ratio of < 0.80 and the recommended survival benefit for OS and PFS should be at least 3 months.
 - Whether the experimental design, considering the drugs and conditions under investigation, is appropriate to address the investigative question. (For example, in some clinical studies, it may be unnecessary or not feasible to use randomization, double blind trials, placebos, or crossover).
 - o That non-randomized clinical trials with a significant number of subjects may be a basis for supportive clinical evidence for determining accepted uses of drugs.
 - That case reports are generally considered uncontrolled and anecdotal information and do not provide adequate supportive clinical evidence for determining accepted uses of drugs.
 - That abstracts (including meeting abstracts) without the full article from the approved peer-reviewed journals lack supporting clinical evidence for determining accepted uses of drugs.

CODING AND STANDARDS

Codes

J9329 - Injection, tislelizumab-jsgr, 1mg

Applicable Lines of Business

	CHIP (Children's Health Insurance Program)
\boxtimes	Commercial
\boxtimes	Exchange/Marketplace

\boxtimes	Medicaid
	Medicare Advantage

POLICY HISTORY

Date	Summary	
March 2025	Converted to new Evolent guideline template	
	 This guideline replaces UM ONC_1499 Tevimbra (tislelizumab-jsgr) 	
	Added new indication	
	Updated references	
May 2024	New Drug Policy
